

ITP-5000 Series

Samsung's Voice over IP Keysets

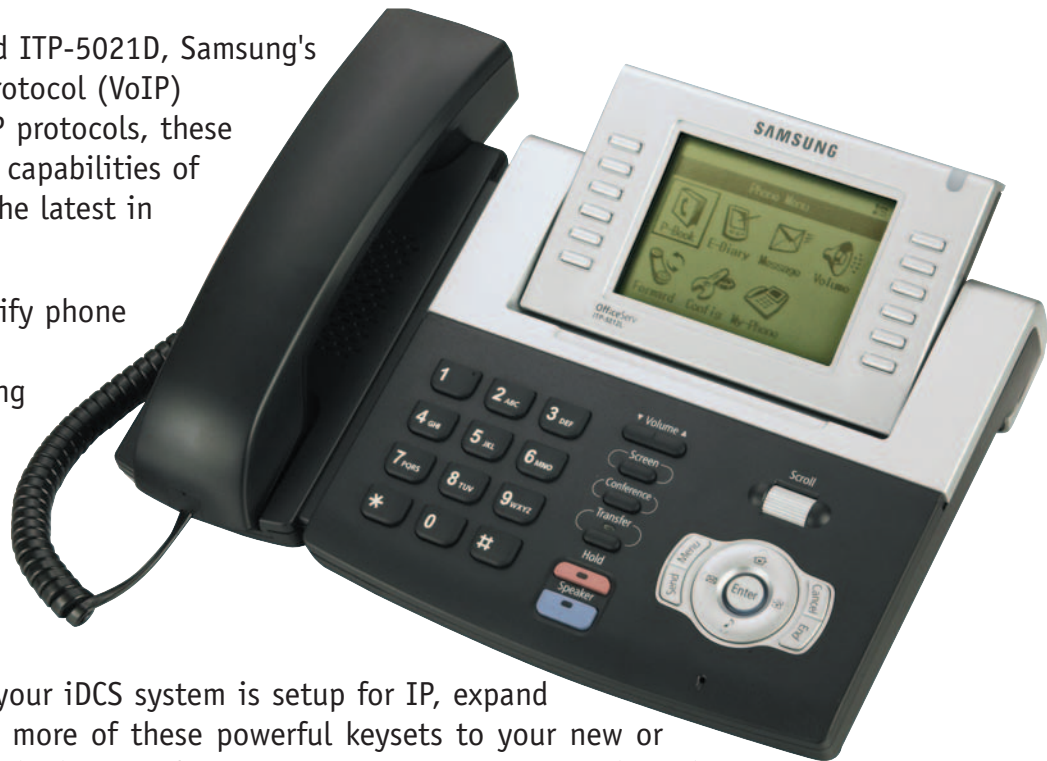

The OfficeServ™ ITP-5012L and ITP-5021D, Samsung's line of Voice over Internet Protocol (VoIP) Keysets. Utilizing standard IP protocols, these keysets combine the features and capabilities of our standard digital keyset with the latest in technological innovation.

Easy to use navigation keys simplify phone use providing quick access to the features you use most and enabling you to customize your phone to meet your personal needs. The ITP-5012L offers a large LCD display and a built-in phone book, calculator, unit conversion and world time clock.

Need to add more phones? Once your iDCS system is setup for IP, expand your system with ease by adding more of these powerful keysets to your new or existing LAN. Thanks to the two built-in 10/100 Base-T LAN connections, these keysets require only a single data connection to carry both voice and data traffic. Connect your computer to this phone and it's ready to go.

Save money by using the ITP Keysets in remote applications like a home office, remote agents, part-time employees, satellite offices or virtually anywhere you can access the Internet. Security is not an issue as only authorized phones will connect to the iDCS telephone system. In addition, use of IP Keysets reduces the amount you will pay in toll charges and simplifies administration.

Make the investment in your company's future today and take full advantage of IP technology that will position your business for success.
